

Building **Production Ready** AI Solutions

TEAM MEETING · MAY 2026

THE CLIENT PROBLEM CHANGED

The work evolved.
The **positioning** caught up.

BEFORE

Product Dev + Rescue

BUILD THE APP → FIX THE SYSTEM → RESCUE THE PROJECT → SHIP THE MVP

NOW

Production **AI Systems**

CONNECT THE SYSTEMS → STRUCTURE THE CONTEXT → AUTOMATE THE WORKFLOW → DEPLOY THE AGENT → OPERATE THE AI SYSTEM

This is not a hard pivot. The reason we can do this work is because we know **production systems**.

THE INDUSTRY IS CONVERGING

Context Engineering is the new discipline.

Tobi Lütke

"I really like the term context engineering over prompt engineering. It describes the core skill better: the art of providing all the context for the task to be plausibly solvable by the LLM."

Shopify CEO · June 2025. The tweet that named the discipline.

Andrej Karpathy

"Context engineering is the delicate art and science of filling the context window with just the right information for the next step."

Ex-OpenAI, ex-Tesla AI · June 2025. Endorsed the shift from prompts to full context design.

G

"To build production-grade agents, treat context as a first-class system with its own architecture, lifecycle, and constraints."

Google ADK · Agent Development Kit built around active context engineering for multi-agent systems.

Anthropic

"Building with LLMs is becoming less about finding the right words and more about: what configuration of context is most likely to generate our model's desired behavior?"

Anthropic Engineering · Sept 2025. Published alongside Claude Sonnet 4.5 launch.

RESOURCES FOR THE TEAM

How we talk about ECE and production AI.

Production-ready AI positioning

Full offer structure

ECE framework and use cases

WHAT PRODUCTION AI ACTUALLY LOOKS LIKE

The chatbot is 5%. The system is 95%.

ENTERPRISE CONTEXT ENGINEERING

Context. Intelligence. Control.

CONTEXT

What AI can understand

The data, relationships, and business logic AI needs to operate.

Connected data across your apps

Role-based access controls

Business objects and relationships

Retrieval tuned per workflow

INTELLIGENCE

What AI can execute

The agents, workflows, and actions that produce useful output.

Agents and multi-step workflows

Human review checkpoints

Actions into CRM, email, docs

Retrieval + reasoning strategies

CONTROL

What makes AI reliable

The evals, feedback, and governance that keep it running.

Testing and eval cases

Feedback loops

Cost and usage visibility

Security and compliance

CRM

Docs

Email

Slack

Context Layer

Workflow / Agent

Brief

Draft

Score

Action

THE FOUR NEW AI OFFERS

Production-Ready **AI Systems**

PRODUCTION-READY AI SYSTEMS

FOUNDATION

Enterprise Context Engineering

Build the context layer AI needs. Connect fragmented systems, structure business context, deploy production AI.

IMPLEMENTATION

Agentic Workflows

Automate one repeatable workflow end to end. Ship in 4–6 weeks with connected systems and structured context.

AGENTS

Autonomous Agents

Deploy scoped agents inside real tools with guardrails. Built on existing tools and business context with human oversight.

OPERATIONS

AI Operations

Keep production AI reliable after launch. Monitoring, evals, tuning, model upgrades, and incident response.

ECE is the **foundation**. Workflows are the first implementation. Agents are scoped roles. AI Ops keeps it running.

WHAT THIS LOOKS LIKE IN REAL WORK

Same pattern. Different clients.

OPS AI

AI scores leads and drafts proposals from GTM context

Agents use ICP rules, CRM history, and 115 business docs to qualify leads and assemble proposals automatically.

HubSpot Apollo DarcyIQ Drive

PRODUCT AI

AI copilot triages compliance violations inside the platform

11 AI surfaces embedded in Alliant's product: risk detection, CPR ingestion, copilot with citations, and governed review queues.

Payroll CPRs Wage data Internal platform

PRODUCT AI

AI personalizes security training and scores phishing risk

Crawl/Walk/Run AI roadmap: phishing report automation, personalized training paths, and compliance analytics built into the platform.

Snowflake Sigma MongoDB Jira

Big State Home Buyers

OPS AI

AI flags deal risk and handles seller inquiries before an agent touches it

Dispo price triage scores every incoming deal on equity confidence. Intercom + Fin AI fields seller questions from the knowledge hub, escalating only when confidence is low.

Deal alerts Intercom Fin AI Knowledge Hub

Boondocker

PRODUCT AI

AI turns a photo of a flyer into a published event listing

Venues photograph a poster and the system extracts structured event data, flags duplicates, and stages the listing for one-tap publish with moderation controls.

iOS/Android Image extraction Admin dashboard

WHERE THE CURRENT WORK STILL FITS

An **evolution** of the work, not a replacement.

TOP LAYER

AI Offers

The new production AI capabilities.

Enterprise Context Engineering

Agentic Workflows

Autonomous Agents

AI Operations

MIDDLE LAYER

Systems & Data

The connective tissue that makes AI possible.

Integrations

Project rescue

Technical debt

Platform stability

MVP builds

LIGHTNING PODS

Delivery model across all layers — expert humans + purpose-built agents

WHAT CHANGES IN DELIVERY

When we scope AI work, we ask **different questions**.

- 01** What workflow repeats every week?
- 02** Where does the context live?
- 03** What should the system produce?
- 04** What action is it allowed to take?
- 05** Who reviews or approves it?
- 06** How do we know the output is good?
- 07** What needs to be logged, monitored, and improved?

MetaCTO builds production-ready software and AI systems for companies with messy real-world operations.

We connect the systems, structure the context, and ship workflows, agents, and products that teams can actually use.

TRUSTED CONTEXT. USABLE OUTPUTS. RELIABLE ACTIONS.

WHAT TO DO NEXT

For the team

✓ **Read** the new homepage, Solutions page, and ECE page.

✓ **Bring** one current client workflow that might fit this pattern.

✓ **Practice** the new talk track with your own words.

✓ **Pick one learning lane** and go deeper.

Context engineering

Agents and tools

RAG and retrieval

Evals and observability

AI operations

Human-in-the-loop systems

Up to \$200 credit for AI learning

Buy and complete a course on any of the listed topics. We'll reimburse up to \$200.

Udacity

Coursera

Google

LangChain

Anthropic

Have fun. This is the work getting more interesting.

Q&A WITH CHRIS AND GARRETT
